ACKNOWLEDGEMENTS

The ongoing success of this international clinical audit is dependent on the hard work and commitment of a large number of individuals working within the paediatric intensive care community. We are very grateful to all the audit clerks, secretaries, nurses and doctors who support and contribute to the Paediatric Intensive Care Audit Network (PICANet) from their own paediatric intensive care units (PICUs).

PICANet was established in collaboration with the Paediatric Intensive Care Society (PICS) and their active support continues to be a key component of our successful progress. The PICANet Steering Group (SG) has patient, academic, clinical, government and NHS members all of whom are thanked for their continuing assistance and advice. Members of the Clinical Advisory Group (CAG) provide a formal interface between PICANet and the clinical care teams and their valuable support and contribution is gratefully acknowledged.

We are also grateful for the support and commitment given by members of the PIC Families Group.

The PICANet Audit is commissioned by the Healthcare Quality Improvement Partnership (HQIP) as part of the National Clinical Audit Programme (NCA). HQIP is led by a consortium of the Academy of Medical Royal Colleges, the Royal College of Nursing and National Voices. Its aim is to promote quality improvement, and in particular to increase the impact that clinical audit has on healthcare quality in England and Wales. HQIP holds the contract to manage and develop the NCA Programme, comprising of more than 30 clinical audits that cover care provided to people with a wide range of medical, surgical and mental health conditions. The PICANet Audit is funded by NHS England, the Welsh Government, NHS Lothian/National Service Division NHS Scotland, the Royal Belfast Hospital for Sick Children, The National Office of Clinical Audit (NOCA), Republic of Ireland and HCA Healthcare.

SMALL NUMBER POLICY

Publication of PICANet data is subject to scrutiny for small numbers. When small numbers of admissions are involved other data items may become identifiable i.e. a living individual may be identified from the data. To address this PICANet refers to the Office for National Statistics (ONS) 'Review of the Dissemination of Health Statistics: Confidentiality Guidance' risk management document which details accepted methods of ensuring anonymity in the data. PICANet applies the 'Suppression' method replacing values of one to four with an asterisk. If a value can still be deduced from the row or column totals secondary suppression is used; values within the cells of the main table are changed to preserve totals where possible and lower numbers including zeros are replaced in preference to larger values. For some tables it may be necessary to anonymise the row or column totals. The resulting tables display anonymous data retaining as many values as possible.

The ONS guidance can be found in

<https://www.ons.gov.uk/methodology/methodologytopicsandstatisticalconcepts/disclosurecontrol/healthstatistics>

EXECUTIVE SUMMARY

This report provides information on all 1,857 children under 16 years admitted to paediatric intensive care in the United Kingdom and the Republic of Ireland, between 1 January 2013 and 31 December 2015, whose usual place of residence is Wales.

- About half of admissions for Welsh children were to the paediatric intensive care unit in Cardiff, the majority of admissions outside Wales were to Bristol and Liverpool PICUs.
- Over half of the admissions were diagnosed with a cardiovascular (28%) or respiratory (30%) condition.
- Over half of admissions were 'unplanned - other' i.e. not following a surgical or non-surgical elective procedure.
- Age specific prevalence was 112 (95%CI: 106-117) admissions per 100,000 children annually in Wales between 2013 and 2015.
- Welsh children received 11,301 bed days in paediatric intensive care, out of which 60% were provided for children under one year of age.
- Crude mortality for Welsh children treated in paediatric intensive care was 4%, compared with 3.7% in the UK and the Republic of Ireland in the period 2013-2015.
- About seven out of ten admissions of Welsh children admitted to PICU were invasive ventilated.
- Nearly six out of ten admissions of Welsh children stayed in PICU for up to 3 days.
- In 2015, unplanned extubation rates were very low for Welsh children, with a total number of 0.5 unplanned extubations per 100 intubated days, compared with an average rate of 0.4 for the UK and the Republic of Ireland as a whole.
- The average emergency readmission rate for Welsh children of 1.7% was the same as the rate for the UK and the Republic of Ireland in the period 2013-2015.

DATA INCLUDED

This report is based on children admitted to paediatric intensive care units in the United Kingdom or the Republic of Ireland whose usual place of residence is Wales.

The data are presented for the three year period January 2013 – December 2015. All data are based on admissions aged 0 – 15 years unless clearly stated otherwise.

This report should be read in conjunction with the National Report of the Paediatric Intensive Care Audit Network National Report January 2013 - December 2015 (published November 2016: Universities of Leeds and Leicester.), which may be accessed at www.picanet.org.uk.

ADMISSIONS BY PRIMARY DIAGNOSTIC GROUP

The primary reason for admission has been categorised into 13 diagnostic groups to enable a simple comparison between organisations. The classification is based on CT3 (The Read Codes).

The groups are mutually exclusive:

- Infection excludes any respiratory or gastrointestinal infection but includes meningitis.
- Neurological disorders include neurovascular complications.
- Oncology includes neuro-oncology (brain tumours).
- Other includes those diagnoses not covered by the other 12 groups.

Read codes are five characters in length and can be made up of numbers, letters, or periods. The ordering of the individual characters does not indicate the hierarchy (e.g. patent ductus arteriosus (P70..) is a subset of congenital abnormality of ductus arteriosus (Xa6aC)).

ADMISSIONS BY ADMISSION TYPE

We have used the following definitions for admission type:

- An admission that is ***planned – following surgery*** is one that the unit is aware of before the surgery begins or one that could have been delayed for 24 hours without risk (e.g. spinal surgery).
- An admission that is ***unplanned – following surgery*** is one that the unit was not aware of before surgery began and one that could not have been delayed without risk (e.g. bleeding tonsillectomy).
- A ***planned - other*** admission is any other planned admission that is not an emergency (e.g. liver biopsy).
- An ***unplanned - other*** admission is one that the unit was not expecting and is therefore an emergency admission (e.g. status epilepticus).

Surgery is defined as undergoing all or part of a procedure or anaesthesia for a procedure in an operating theatre or anaesthetic room. Patients admitted from the operating theatre where surgery is not the main reason for admission (e.g. a patient with a head injury who is admitted from theatre after insertion of an ICP monitor) are not included here. In such patients the main reason for admission is head injury and thus the admission type would be ***unplanned - other***.

RETRIEVAL DATA

Data are collected on whether or not a child was retrieved / transferred into the PICU. We have used the following definitions:

- *Own team* identifies that the team from the admitting hospital collected the child from the referring hospital.
- *Other specialist team (PICU)* identifies that another PICU retrieval team transferred the child to the admitting unit.
- *Other specialist team (non PICU)* identifies that another transport team, not a PICU team (e.g. Accident and Emergency Department (A&E), theatre teams or neonatal teams), transferred the child to the admitting unit.
- *Non-specialist team* identifies that a non-PICU, non-specialist team transported the child to the admitting unit (e.g. ward staff).

VENTILATION STATUS

Length of ventilation has been calculated in days. Any ventilation episode during the period midnight to midnight was counted as one complete day (e.g. a child intubated and ventilated at 23.45 on 7 March and extubated at 02.30 on 8 March would count as two days of ventilation). Intubation and extubation times are not recorded in the PICANet dataset therefore more precise ventilation duration times are not available.

STANDARDISED MORTALITY RATIOS

Tables and figures showing the standardised mortality ratios for all units have been reproduced from the National Report so that table and figure numbering is consistent across both reports. These tables include all patients admitted to PICU regardless of age. These ratios are calculated using the recalibrated PIM2, described in the 2016 Annual Report.

NEW DATASET

Two new measures were introduced in mid-2014: these were unplanned extubation, expressed as a rate per 100 intubated days and high flow nasal cannula therapy. By the 1st January 2015 all units had started collection of these new data items.

UNPLANNED EXTUBATION

A new table showing the rates of unplanned extubation per 100 intubated days has been produced for Welsh children. The figure has been reproduced from the Annual Report and presents the rates by PICU. Unplanned extubations were calculated for all children admitted to PICU regardless of age.

HIGH FLOW NASAL CANNULA THERAPY

A new table showing the numbers of high flow admissions by organisation with the number of days in which high flow nasal cannula therapy was administered and details of the median, minimum and maximum days of therapy has been produced for Welsh children.

CHANGES IN TABLES 26-28

Following review of the Retrieval and Transfer data published in the 2016 Annual Report we have decided to revise Tables 26-28 to reflect a change in the definition of 'transport team type' introduced in the admissions form in mid-2014 (see supplement of the main Annual Report). As a result, these tables only include 2015 data.

A horizontal bar chart titled 'Admissions' showing the number of admissions for four categories: 'Unplanned - other', 'Planned - other', 'Unplanned - following surgery', and 'Planned - following surgery'. The x-axis represents the number of admissions, ranging from 0 to 600. The y-axis lists the categories. For each category, four bars represent different age groups: <1 (dark blue), 1-4 (light blue), 5-10 (medium blue), and 11-15 (dark blue). The 'Unplanned - other' category has the highest admissions, with the <1 age group having the most admissions in that category. The 'Planned - following surgery' category also shows a high number of admissions, particularly for the 11-15 age group.

Category	<1	1-4	5-10	11-15
Unplanned - other	540	280	140	130
Planned - other	50	10	5	5
Unplanned - following surgery	50	40	20	15
Planned - following surgery	260	160	120	110
