ACKNOWLEDGEMENTS

The ongoing success of this international clinical audit is dependent on the hard work and commitment of a large number of individuals working within the paediatric intensive care community. We are very grateful to all the audit clerks, secretaries, nurses and doctors who support and contribute to the Paediatric Intensive Care Audit Network (PICANet) from their own paediatric intensive care units (PICUs).

PICANet was established in collaboration with the Paediatric Intensive Care Society (PICS) and their active support continues to be a key component of our successful progress. The PICANet Steering Group (SG) has patient, academic, clinical, government and NHS members all of whom are thanked for their continuing assistance and advice. Members of the Clinical Advisory Group (CAG) provide a formal interface between PICANet and clinical care teams and their valuable support and contribution is gratefully acknowledged.

We are also grateful for the support and commitment given by members of the PIC Families Group.

The PICANet Audit is commissioned by the Healthcare Quality Improvement Partnership (HQIP) as part of the National Clinical Audit Programme (NCA). HQIP is led by a consortium of the Academy of Medical Royal Colleges, the Royal College of Nursing and National Voices. Its aim is to promote quality improvement, and in particular to increase the impact that clinical audit has on healthcare quality in England and Wales. HQIP holds the contract to manage and develop the NCA Programme, comprising more than 30 clinical audits that cover care provided to people with a wide range of medical, surgical and mental health conditions. The PICANet Audit is funded by NHS England, the Welsh Government, NHS Lothian/National Service Division NHS Scotland, the Royal Belfast Hospital for Sick Children, The National Office of Clinical Audit (NOCA), Republic of Ireland and HCA Healthcare.

EXECUTIVE SUMMARY

This report provides information on all 1,664 children under 16 years admitted to paediatric intensive care in the United Kingdom, between 1 January 2011 and 31 December 2013, whose usual place of residence is Northern Ireland.

- Four out of five children resident in Northern Ireland were treated in The Royal Belfast Hospital for Sick Children; 15% were admitted to PICUs in other areas of the United Kingdom and 5% to units in the Republic of Ireland.
- 48% of children were less than 1 year of age at admission.
- Nearly half of all admissions were 'planned - following surgery'.
- Age specific prevalence was 145 (95%CI: 138-152) admissions per 100,000 children annually in Northern Ireland between 2011 and 2013.
- 10,525 bed days were provided for Northern Irish children treated in paediatric intensive care, over half of which were provided for children under one year of age.
- Crude mortality for Northern Irish children treated in paediatric intensive care was 3.9%, compared with 3.7% in the UK and Ireland from 2011-2013.

DATA INCLUDED

This report is based on children admitted to paediatric intensive care units in the United Kingdom or the Republic of Ireland whose usual place of residence is Northern Ireland, this is the third Northern Ireland report from PICANet.

The data are presented for the three year period January 2011 – December 2013. All data are based on admissions aged 0 – 15 years unless clearly stated otherwise.

There are 33 participating NHS organisations (Health Boards, Trusts or other governing bodies) located in the United Kingdom, 32 of whom collected data for the entire reporting period. These, together with some non-NHS bodies, are referred to as Health Organisations.

This report should be read in conjunction with the National Report of the Paediatric Intensive Care Audit Network National Report January 2011 - December 2013 (published September 2014: Universities of Leeds and Leicester.), which may be accessed at www.picanet.org.uk.

ADMISSIONS BY PRIMARY DIAGNOSTIC GROUP

The primary reason for admission has been categorised into 13 diagnostic groups to enable a simple comparison between organisations. The classification is based on CT3 (The Read Codes). The groups are mutually exclusive:

- Infection excludes any respiratory or gastrointestinal infection but includes meningitis.
- Neurological disorders include neurovascular complications.
- Oncology includes neuro-oncology (brain tumours).
- Other includes those diagnoses not covered by the other 12 groups.

Read codes are five characters in length and can be made up of numbers, letters, or periods. The ordering of the individual characters does not indicate the hierarchy (e.g. patent ductus arteriosus (P70..) is a subset of congenital abnormality of ductus arteriosus (Xa6aC)).

ADMISSIONS BY ADMISSION TYPE

We have used the following definitions for admission type:

- An admission that is *planned - following surgery* is one that the unit is aware of before the surgery begins or one that could have been delayed for 24 hours without risk (e.g. spinal surgery).
- An admission that is *unplanned - following surgery* is one that the unit was not aware of before surgery began and one that could not have been delayed without risk (e.g. bleeding tonsillectomy).
- A *planned - other* admission is any other planned admission that is not an emergency (e.g. liver biopsy).
- An *unplanned - other* admission is one that the unit was not expecting and is therefore an emergency admission (e.g. status epilepticus).

Surgery is defined as undergoing all or part of a procedure or anaesthesia for a procedure in an operating theatre or anaesthetic room. Patients admitted from the operating theatre where surgery is not the main reason for admission (e.g. a patient with a head injury who is admitted from theatre after insertion of an ICP monitor) are not included here. In such patients the main reason for admission is head injury and thus the admission type would be *unplanned - other*.

RETRIEVAL DATA

Data are collected on whether or not a child was retrieved / transferred into the PICU. We have used the following definitions:

- *Own team* identifies that the team from the admitting hospital collected the child from the referring hospital.
- *Other specialist team (PICU)* identifies that another PICU retrieval team transferred the child to the admitting unit.
- *Other specialist team (non PICU)* identifies that another transport team, not a PICU team (e.g. Accident and Emergency Department (A&E), theatre teams or neonatal teams), transferred the child to the admitting unit.
- *Non-specialist team* identifies that a non-PICU, non-specialist team transported the child to the admitting unit. (e.g. ward staff).

VENTILATION STATUS

Length of ventilation has been calculated in days. Any ventilation episode during the period midnight to midnight was counted as one complete day (e.g. a child intubated and ventilated at 23.45 on 7 March and extubated at 02.30 on 8 March would count as two days of ventilation). Intubation and extubation times are not recorded in the PICANet dataset therefore more precise ventilation duration times are not available.

STANDARDISED MORTALITY RATIOS

Tables and figures showing the standardised mortality ratios for all units have been reproduced from the National Report so that table and figure numbering is consistent across both reports. These tables include all patients admitted to PICU regardless of age. These ratios are calculated using the recalibrated PIM2, described in the 2014 Annual Report.

ANONYMISATION

Regional reports have been anonymised to suppress cell counts less than 5 to prevent the possibility of individuals being identified. In some cases this has led to whole tables or figures being suppressed and a number of other tables having data missing.

In future years data may be aggregated to prevent the presence of small numbers.

If you require access to the complete versions of the tables a request can be made to PICANet using the standard data request form available on the PICANet website.

A horizontal bar chart titled 'Admissions' showing the number of admissions for four surgery types across four age groups. The x-axis represents the number of admissions, ranging from 0 to 500. The y-axis lists the surgery types: 'Unplanned - other', 'Planned - other', 'Unplanned - following surgery', and 'Planned - following surgery'. The legend indicates four age groups: <1 (dark blue), 1-4 (light blue), 5-10 (medium blue), and 11-15 (dark blue). The chart shows that 'Unplanned - other' has the highest number of admissions, particularly in the <1 age group. 'Planned - following surgery' also shows a significant number of admissions, especially in the 1-4 age group.

This table (and 52 -55) now report numbers of children rather than admissions.

The total is the number of children discharged alive from their final PICU admission other than to normal residence. In future 30 day follow up will be requested for children discharged to normal residence.

As in all tables in this report, counts >0 and < 5 are replaced by asterisks to ensure confidentiality. Other counts may also be suppressed to make it impossible to calculate the numbers.
