ACKNOWLEDGEMENTS

The ongoing success of this international clinical audit is dependent on the hard work and commitment of a large number of individuals working within the paediatric intensive care community. We are very grateful to all the audit clerks, secretaries, nurses and doctors who support and contribute to the Paediatric Intensive Care Audit Network (PICANet) from their own paediatric intensive care units (PICUs).

PICANet was established in collaboration with the Paediatric Intensive Care Society (PICS) and their active support continues to be a key component of our successful progress. The PICANet Steering Group (SG) has patient, academic, clinical, government and NHS members all of whom are thanked for their continuing assistance and advice. Members of the Clinical Advisory Group (CAG) provide a formal interface between PICANet and clinical care teams and their valuable support and contribution is gratefully acknowledged.

We are also grateful for the support and commitment given by members of the PIC Families Group.

PICANet has been awarded funding to 31st March 2018 from the National Clinical Audit & Patient Outcomes Programme, administered by the Healthcare Quality Improvement Partnership (HQIP); Welsh Health Specialised Services Committee; NHS Lothian/National Service Division NHS Scotland; the Royal Belfast Hospital for Sick Children; National Office of Clinical Audit Ireland (NOCA) and HCA International.

FOREWORD

It is my pleasure to provide the Foreword to the fifth PICANet National Report for Scotland, covering the three years from January 2011 to December 2013. It includes data on all paediatric intensive care (PIC) admissions to units in the UK, of children under 16 years, who are normally resident in Scotland. The majority of care (over 96% of both admissions and bed days) was delivered by the Scottish National Paediatric Intensive Care Service in the two Paediatric Intensive Care Units in Glasgow and Edinburgh.

Consistent with previous reports, the prevalence of PIC admissions has remained at around 1.5 per 1000 Scottish children. We continue to see a steady increase in workload (4% increase in total admissions and 7% increase in bed days) compared with the previous report. Median age on admission remains less than 2 years and over half of the 25,605 bed days were for children under one year of age.

Half of all admissions were unplanned (emergency) in nature with marked seasonal variation. This remains the biggest challenge to both health care managers and planners; to maintain sufficient flexibility in capacity to accommodate spikes in unplanned admissions while sustaining the planned elective activity from the national major surgery programmes; Cardiac (Glasgow) and Scoliosis (Edinburgh). In attempt to address this, a recent review of Scottish PIC capacity by NHS Scotland National Services Division (NSD), employing PICANet data, has recommended an increase in the provision of paediatric intensive care beds in Scotland. The Health Board Chief Executives have agreed that an additional 9 beds are needed, beginning this year with 3 beds in Glasgow and 2 beds in Edinburgh. NSD are working with both PICUs to implement this as soon as possible.

Crude mortality rate continues to be very low, at 2.2% for Scottish children admitted to PICU. The unadjusted and adjusted SMRs for the Scottish PICUs are comfortably within the acceptable

limits of the funnel plots. Notably, emergency readmission within 48 hours of discharge remains reassuringly low at around 1.4% of cases.

To ensure the future of a robust and flexible retrieval service providing equity of access to PIC for children in every corner of Scotland, the nationally commissioned PIC Retrieval Service joined with Neonatal and Adult specialist transport services and the Scottish Ambulance Service on 1st April 2014 to form ScotSTAR, a single harmonised transport service. The service will be operating out of a new purpose built base in Glasgow airport from summer 2015. The new PICANet transport and referral dataset will be invaluable in the development of the paediatric component of ScotSTAR, ensuring we continue to provide the highest quality of transport service to children during the transition phase.

Clinicians and health care planners in Scotland are currently grappling with the issues surrounding the delivery of high dependency level critical care, closer to home, through an evolving national network supported by the national PIC and retrieval services. Robust clinical audit to improve patient outcomes by providing information on delivery of care and an evidence base for clinical governance will be essential for the success of this initiative.

I would like to thank the PICANet team for publishing such a high-quality and detailed report for the children of Scotland.

DAVID ROWNEY

CONSULTANT IN PAEDIATRIC INTENSIVE CARE AND RETRIEVAL

ROYAL HOSPITAL FOR SICK CHILDREN, EDINBURGH

EXECUTIVE SUMMARY

This report provides information on all 4,313 children under 16 years admitted to paediatric intensive care in the United Kingdom, between 1 January 2011 and 31 December 2013, whose usual place of residence is Scotland.

- The majority of Scottish children were treated in Scottish paediatric intensive care units with fewer than 3% admitted to units outside Scotland.
- 48% of admissions received invasive ventilation.
- Half of all admissions were 'planned - following surgery'.
- Age specific prevalence was 157 (95%CI: 153-162) admissions per 100,000 children annually in Scotland between 2011 and 2013.
- 25,605 bed days were provided for Scottish children treated in paediatric intensive care, over half of which were provided for children under one year of age.
- Crude mortality for Scottish children treated in paediatric intensive care was 2.2%, compared with 3.7% in the UK and Ireland from 2011-2013.

DATA INCLUDED

This report is based on children admitted to paediatric intensive care in the United Kingdom whose usual place of residence is Scotland. The data are presented for the three year period January 2011 – December 2013. All data are based on admissions aged 0 – 15 years unless clearly stated otherwise.

There are 33 participating NHS organisations (Health Boards, Trusts or other governing bodies) located in the United Kingdom, 32 of whom collected data for the entire reporting period. These, together with some non-NHS bodies, are referred to as Health Organisations.

This report should be read in conjunction with the National Report of the Paediatric Intensive Care Audit Network National Report January 2011 - December 2013 (published September 2014: Universities of Leeds and Leicester.), which may be accessed at www.picanet.org.uk.

ADMISSIONS BY PRIMARY DIAGNOSTIC GROUP

The primary reason for admission has been categorised into 13 diagnostic groups to enable a simple comparison between organisations. The classification is based on CT3 (The Read Codes). The groups are mutually exclusive:

- Infection excludes any respiratory or gastrointestinal infection but includes meningitis.
- Neurological disorders include neurovascular complications.
- Oncology includes neuro-oncology (brain tumours).
- Other includes those diagnoses not covered by the other 12 groups.

Read codes are five characters in length and can be made up of numbers, letters, or periods. The ordering of the individual characters does not indicate the hierarchy (e.g. patent ductus

arteriosus (P70..) is a subset of congenital abnormality of ductus arteriosus (Xa6aC)).

ADMISSIONS BY LOCAL HEALTH BOARD

The number of admissions by Local Health Board (HB) was obtained by linking the validated home addresses of children admitted to PICU to HB via the National Statistics Postcode Directory (NSPD). Note that these are the new Boards (effective from Oct 2009).

ADMISSIONS BY ADMISSION TYPE

We have used the following definitions for admission type:

- An admission that is *planned - following surgery* is one that the unit is aware of before the surgery begins or one that could have been delayed for 24 hours without risk (e.g. spinal surgery).
- An admission that is *unplanned - following surgery* is one that the unit was not aware of before surgery began and one that could not have been delayed without risk (e.g. bleeding tonsillectomy).
- A *planned - other* admission is any other planned admission that is not an emergency (e.g. liver biopsy).
- An *unplanned - other* admission is one that the unit was not expecting and is therefore an emergency admission (e.g. status epilepticus).

Surgery is defined as undergoing all or part of a procedure or anaesthesia for a procedure in an operating theatre or anaesthetic room. Patients admitted from the operating theatre where surgery is not the main reason for admission (e.g. a patient with a head injury who is admitted from theatre after insertion of an ICP monitor) are not included here. In such patients the main reason

for admission is head injury and thus the admission type would be *unplanned - other*.

RETRIEVAL DATA

Data are collected on whether or not a child was retrieved / transferred into the PICU. We have used the following definitions:

- *Own team* identifies that the team from the admitting hospital collected the child from the referring hospital.
- *Other specialist team (PICU)* identifies that another PICU retrieval team transferred the child to the admitting unit.
- *Other specialist team (non PICU)* identifies that another transport team, not a PICU team (e.g. Accident and Emergency Department (A&E), theatre teams or neonatal teams), transferred the child to the admitting unit.
- *Non-specialist team* identifies that a non-PICU, non-specialist team transported the child to the admitting unit. (e.g. ward staff).

VENTILATION STATUS

Length of ventilation has been calculated in days. Any ventilation episode during the period midnight to midnight was counted as one complete day (e.g. a child intubated and ventilated at 23.45 on 7 March and extubated at 02.30 on 8 March would count as two days of ventilation). Intubation and extubation times are not recorded in the PICANet dataset therefore more precise ventilation duration times are not available.

STANDARDISED MORTALITY RATIOS

Tables and figures showing the standardised mortality ratios for all units have been reproduced from the National Report so that table and figure numbering is consistent across both reports. These tables include all patients admitted to PICU regardless of age. These ratios are calculated using the recalibrated PIM2, described in the 2014 Annual Report.

ANONYMISATION

Regional reports have been anonymised to suppress cell counts less than 5 to prevent the possibility of individuals being identified. In some cases this has led to whole tables or figures being suppressed and a number of other tables having data missing.

In future years data may be aggregated to prevent the presence of small numbers.

If you require access to the complete versions of the tables a request can be made to PICANet using the standard data request form available on the PICANet website.

TABLE 1 ADMISSIONS BY AGE AND SEX, 2011 - 2013

TABLE 51 SCOTTISH CHILDREN BY FOLLOW-UP STATUS AND AGE, 2011 - 2013

Age Group	30 DAY FOLLOW-UP STATUS							
	Alive		Dead		Unknown		Total	
	n	%	n	%	n	%	n	%
<1 year	275	(25.1)	**	(**)	818	(74.8)	**	(**)
1-4 years	276	(26.2)	**	(**)	776	(73.6)	**	(**)
5-10 years	171	(31.3)	0	(0.0)	375	(68.7)	546	(16.5)
11-15 years	389	(64.0)	0	(0.0)	219	(36.0)	608	(18.4)
Total	1,111	(33.6)	**	(**)	2,188	(66.3)	**	(**)

This table (and 52 -55) now report numbers of children rather than admissions.

As in all tables in this report, counts >0 and < 5 are replaced by asterisks to ensure confidentiality

Other counts may also be suppressed to make it impossible to calculate the numbers.

TABLE 52 SCOTTISH CHILDREN BY FOLLOW-UP STATUS AND AGE (<1 YEAR), 2011 - 2013

Age Group (Months)	30 DAY FOLLOW-UP STATUS							
	Alive		Dead		Unknown		Total	
	n	%	n	%	n	%	n	%
< 1 month	96	(35.2)	**	(**)	176	(64.5)	**	(**)
1-2months	79	(30.2)	0	(0.0)	183	(69.8)	262	(23.9)
3-5 months	38	(16.0)	0	(0.0)	199	(84.0)	237	(21.7)
6-11 months	62	(19.3)	0	(0.0)	260	(80.7)	322	(29.4)
Total	275	(25.1)	**	(**)	818	(74.8)	**	(**)

As in all tables in this report, counts >0 and < 5 are replaced by asterisks to ensure confidentiality

Other counts may also be suppressed to make it impossible to calculate the numbers.

TABLE 53 SCOTTISH CHILDREN BY FOLLOW-UP STATUS AND SEX, 2011 - 2013

Sex	30 DAY FOLLOW-UP STATUS							
	Alive		Dead		Unknown		Total	
	n	%	n	%	n	%	n	%
Male	523	(29.3)	**	(**)	1,263	(70.6)	**	(**)
