2 ACKNOWLEDGEMENTS

We are acutely aware that the success of this national clinical audit is highly dependent on the hard work and commitment of a large number of individuals working within the paediatric intensive care community. We are very grateful to all the audit clerks, secretaries, nurses and doctors who support and contribute to the Paediatric Intensive Care Audit Network (PICANet) from their own paediatric intensive care units (PICUs).

PICANet was established in collaboration with the Paediatric Intensive Care Society (PICS) and their active support continues to be a key component of our successful progress.

The PICANet Steering Group (SG) has patient, academic, clinical, government and NHS members all of whom are thanked for their continuing assistance and advice.

Members of our Clinical Advisory Group (CAG) are PICANet's formal interface with clinical care teams and their valuable support and contribution is gratefully acknowledged.

PICANet is funded by the Healthcare Quality Improvement Partnership (HQIP), Health Commission Wales Specialised Services, NHS Lothian / National Service Division NHS Scotland, the Royal Belfast Hospital for Sick Children and the Pan Thames PICU Commissioning Consortium.

The organisation and functioning of PICANet is dependent on IT programming and development from Martin Perkins (University of Leicester), who we thank for his essential contributions. We also thank Tom Fleming (University of Leeds) who continues to assist PICANet although he no longer works for us.

3 FOREWORD

This is the fifth annual report describing where, when and why critically ill Welsh children receive intensive care treatment. PICANet continues to provide the most reliable, validated data relating to activity and outcomes of paediatric intensive care units across the United Kingdom.

The year on year increase for the period of 2005 - 7 described in last year's report has not been sustained, and admissions are slightly decreased from 2007 to 2008. However, the relatively large increase in unplanned admissions that occurred between 2006 and 2007 has been sustained in 2008. Respiratory admissions have also increased slightly.

The prevalence of admission to PICU by age group shows the expected highest prevalence in the under 1 year olds, and with marked year to year variability. A notable consistent feature from year to year in this age group is the greater prevalence in admission for male infants.

The prevalence of admission according to LHB area is also of interest. The figures for a 3 year period do at first glance show a marked variation between regions, although once the 95% confidence intervals are examined, those differences are less impressive. It is noted that Anglesey, Blaenau Gwent, and Torfaen do have prevalence rates for the past three years in which the lower confidence interval exceeds the upper confidence intervals for a few other LHB areas – as always, it will be interesting to watch this over time.

I would like to congratulate the PICANet team in Leeds again for producing such well validated and complete information. Producing data of this quality has a cost (in time as well as money), but it is an important part of planning healthcare and assessing its quality, and it is vital that PICANet continues to develop its work.

Dr Allan Wardhaugh
Consultant in Paediatric Intensive Care
University Hospital of Wales
Cardiff & Vale NHS Trust

4 EXECUTIVE SUMMARY

- This report provides information on all children admitted to paediatric intensive care in Great Britain whose usual place of residence is Wales.
- Data are presented on 1870 paediatric intensive care admissions over the three year period 1 January 2006 – 31 December 2008.
- The number of children admitted increased from 588 in 2006 to 648 in 2007, then declined slightly to 634 in 2008.
- Nearly half (46%) of admissions are under one year of age and the male to female ratio is 1.35:1.
- Admissions to Cardiff & Vale NHS Trust represent nearly half (48%) of all Welsh children admitted to paediatric intensive care and most of the remaining children (41% of the total) are admitted to the Royal Liverpool Children's NHS Trust or the United Bristol Healthcare NHS Trust.
- Prevalence for admission varies nearly two-fold between Health Boards
- Unplanned admissions accounted for 57% of all admissions
- 81% of admissions received invasive ventilation
- 9615 bed days were provided for Welsh children treated in paediatric intensive care, 56% of which were received by patients under one year of age.
- Crude mortality for Welsh children treated in paediatric intensive care was 4.2%.

5 DATA INCLUDED

This report is based on children admitted to paediatric intensive care units in England, Wales and Scotland whose usual place of residence is Wales. The data are presented for the three year period January 2006 – December 2008. All data are based on admissions aged 0 – 15 years unless clearly stated otherwise.

There are 28 participating NHS trusts (located in England, Wales, Scotland and Northern Ireland), 24 of whom collected data for the entire reporting period. Barts and the London, Belfast, Edinburgh and Glasgow did not contribute over the whole period.

This report should be read in conjunction with the National Report of the Paediatric Intensive Care Audit Network National Report January 2006 - December 2008 (published July 2009):Universities of Leeds and Leicester. ISBN 978 0 85316 283 4.

5.1 Admissions by primary diagnostic group

The primary reason for admission has been categorised into 13 diagnostic groups to enable a simple comparison between NHS trusts. The classification is based on CT3 (The Read Codes). The groups are mutually exclusive:

- Infection excludes any respiratory or gastrointestinal infection but includes meningitis
- Neurological disorders include neurovascular complications
- Oncology includes neuro-oncology (brain tumours)
- Other includes those diagnoses not covered by the other 12 groups

Read codes are five characters in length and can be made up of numbers, letters, or periods. The ordering of the individual characters does not indicate the hierarchy (e.g. patent ductus arteriosus (P70..) is a subset of congenital abnormality of ductus arteriosus (Xa6aC)).

5.2 Admissions by Local Health Board

The number of admissions by Local HB was obtained by linking the validated home addresses of children admitted to PICU to HB via the National Statistics Postcode Directory (NSPD).

5.3 Admissions by admission type

We have used the following definitions for admission type:

- An admission that is 'planned - following surgery' is one that the unit is aware of before the surgery begins and one that could have been delayed for 24 hours without risk (e.g. spinal surgery).
- An admission that is 'unplanned - following surgery' is one that the unit was not aware of before surgery began and one that could not have been delayed without risk (e.g. bleeding tonsillectomy).
- A 'planned - other' admission is any other planned admission that is not an emergency (e.g. liver biopsy).
- An 'unplanned - other' admission is one that the unit was not expecting and is therefore an emergency admission (e.g. status epilepticus).

Surgery is defined as undergoing all or part of a procedure or anaesthesia for a procedure in an operating theatre or anaesthetic room. Patients admitted from the operating theatre where surgery is not the main reason for admission (e.g. a patient with a head injury who is admitted from theatre after insertion of an ICP monitor) are not included here.

In such patients the main reason for admission is head injury and thus the admission type would be 'unplanned - other'.

5.4 Retrieval data

Data are collected on whether or not a child was retrieved / transferred into the PICU. We have used the following definitions:

- 'Own team' identifies that your own team collected the child from the referring hospital.
- 'Other specialist team (PICU)' identifies that another PICU retrieval team transferred the child to your unit.
- 'Other specialist team (non PICU)' identifies that another transport team, not a PICU team (e.g. Accident and Emergency Department (A&E), theatre teams or neonatal teams), transferred the child to your unit.
- 'Non-specialist team' identifies that a non-PICU, non-specialist team transported the child to your unit (e.g. ward staff).

5.5 Ventilation status

Length of ventilation has been calculated in days. Any ventilation episode during the period midnight to midnight was counted as one complete day (e.g. a child intubated and ventilated at 23.45 on 7 March and extubated at 02.30 on 8 March would count as two days of ventilation). Intubation and extubation times are not recorded in the PICANet dataset therefore more precise ventilation duration times are not available.

5.6 Standardised Mortality Ratios

Tables and figures showing the standardised mortality ratios for units in England, Wales and Scotland have been reproduced from the National Report so that table and figure numbering is consistent across both reports.
