

Daily interventions

Please record all interventions and results for each day Continuous Renal Replacement Therapy (CRRT) is given (00.00-23.59hrs) using a cross [X] or numeric value. If value not measured record 999.

Date of initiation of CRRT:

Date: / / 20 / / 20 / / 20

CRRT (record all given in day)	Peritoneal Dialysis										
	CVVH (continuous venovenous haemofiltration)										
	CVVHD (continuous venovenous haemodialysis)										
	CVVHDF (continuous venovenous haemodiafiltration)										

Laboratory measured values	Creatinine highest value ($\mu\text{mol/l}$)										
	Ammonia highest value ($\mu\text{mol/l}$) required if indication for RRT										
	Lactate highest value (mmol/l)		.			.			.		
	Net fluid balance in day (mls) +/-										
	Total urine output in day (mls)										

Peritoneal dialysis *complete all that apply*

Complications	No peritoneal dialysis complications										
	Catheter replacement										
	Inadequate flow										
	Catheter leakage										
	Peritonitis										

Extra-corporeal CRRT *complete all that apply*

Vascular access change	No vascular access change(s)										
	Line clotted										
	Bleeding from line insertion site										
	Line dislodged										
	Line infection										
	Elective change										
	Other (describe in Notes below)										

CRRT filter changes	No CRRT filter change(s)										
	Elective filter change(s) (record number of changes)										
	Unplanned filter change(s) (record number of changes)										

Anticoagulation	No anticoagulation given										
	Heparin										
	Citrate										
	Prostacyclin										
	Other (describe in Notes below)										

Blood products transfused	No blood products transfused										
	Packed red blood cells - CRRT circuit prime										
	Packed red blood cells - transfusion										
	Platelets										
	Fresh Frozen Plasma										
	Cryoprecipitate										

Notes (record dd/mm for each note)
