ACKNOWLEDGEMENTS

The ongoing success of this international clinical audit is dependent on the hard work and commitment of a large number of individuals working within the paediatric intensive care community. We are very grateful to all the audit clerks, secretaries, nurses and doctors who support and contribute to the Paediatric Intensive Care Audit Network (PICANet) from their own paediatric intensive care units (PICUs).

PICANet was established in collaboration with the Paediatric Intensive Care Society (PICS) and their active support continues to be a key component of our successful progress. The PICANet Steering Group (SG) has patient, academic, clinical, government and NHS members all of whom are thanked for their continuing assistance and advice. Members of the Clinical Advisory Group (CAG) provide a formal interface between PICANet and the clinical care teams and their valuable support and contribution is gratefully acknowledged.

We are also grateful for the support and commitment given by members of the PIC Families Group.

The PICANet Audit is commissioned by the Healthcare Quality Improvement Partnership (HQIP) as part of the National Clinical Audit Programme (NCA). HQIP is led by a consortium of the Academy of Medical Royal Colleges, the Royal College of Nursing and National Voices. Its aim is to promote quality improvement, and in particular to increase the impact that clinical audit has on healthcare quality in England and Wales. HQIP holds the contract to manage and develop the NCA Programme, comprising of more than 30 clinical audits that cover care provided to people with a wide range of medical, surgical and mental health conditions. The PICANet Audit is funded by NHS England, the Welsh Government, NHS Lothian/National Service Division NHS Scotland, the Royal Belfast Hospital for Sick Children, the National Office of Clinical Audit (NOCA), Republic of Ireland and HCA Healthcare.

EXECUTIVE SUMMARY

This report provides information on all 4,351 children under 16 years admitted to paediatric intensive care in the United Kingdom and the Republic of Ireland, between 1 January 2014 and 31 December 2016, whose usual place of residence is Scotland.

- The majority of Scottish children were treated in Glasgow (68%).
- Half of the admissions were diagnosed with a cardiovascular (19%) or respiratory (32%) condition.
- Almost half of admissions were 'unplanned - other' i.e. not following a surgical or non-surgical elective procedure.
- Age specific prevalence was 156 (95%CI: 153-163) admissions per 100,000 children annually in Scotland between 2014 and 2016.
- Scottish children received 30,029 bed days in paediatric intensive care, out of which 53% were provided for children under one year of age.
- Crude mortality for Scottish children treated in paediatric intensive care was 2.2%, compared with 3.7% in the UK and the Republic of Ireland in the period 2014-2016.
- Half of children from Scotland admitted to PICU were invasively ventilated.
- Over half of Scottish children admitted to PICU stayed on the unit for up to 3 days.
- In 2015-2016, unplanned extubation rates were very low for Scottish children ranging between 0 and 1.3 unplanned extubations per 100 intubated days.
- The average emergency readmissions rate for Scottish children was 1.8% compared with 1.6% in the UK and the Republic of Ireland in the period 2014-2016.

DATA INCLUDED

This report is based on children admitted to paediatric intensive care units in the United Kingdom or the Republic of Ireland whose usual place of residence is Scotland.

The data are presented for the three year period January 2014 – December 2016. All data are based on admissions aged 0 – 15 years unless clearly stated otherwise.

This report should be read in conjunction with the National Report of the Paediatric Intensive Care Audit Network National Report January 2014 - December 2016 (published November 2017: Universities of Leeds and Leicester.), which may be accessed at www.picanet.org.uk.

ADMISSIONS BY PRIMARY DIAGNOSTIC GROUP

The primary reason for admission has been categorised into 13 diagnostic groups to enable a simple comparison between organisations. The classification is based on CT3 (The Read Codes).

The groups are mutually exclusive:

- Infection excludes any respiratory or gastrointestinal infection but includes meningitis.
- Neurological disorders include neurovascular complications.
- Oncology includes neuro-oncology (brain tumours).
- Other includes those diagnoses not covered by the other 12 groups.

Read codes are five characters in length and can be made up of numbers, letters, or periods. The ordering of the individual characters does not indicate the hierarchy (e.g. patent ductus arteriosus (P70..) is a subset of congenital abnormality of ductus arteriosus (Xa6aC)).

ADMISSIONS BY ADMISSION TYPE

We have used the following definitions for admission type:

- An admission that is ***planned – following surgery*** is one that the unit is aware of before the surgery begins or one that could have been delayed for 24 hours without risk (e.g. spinal surgery).
- An admission that is ***unplanned – following surgery*** is one that the unit was not aware of before surgery began and one that could not have been delayed without risk (e.g. bleeding tonsillectomy).
- A ***planned - other*** admission is any other planned admission that is not an emergency (e.g. liver biopsy).
- An ***unplanned - other*** admission is one that the unit was not expecting and is therefore an emergency admission (e.g. status epilepticus).

Surgery is defined as undergoing all or part of a procedure or anaesthesia for a procedure in an operating theatre or anaesthetic room. Patients admitted from the operating theatre where surgery is not the main reason for admission (e.g. a patient with a head injury who is admitted from theatre after insertion of an ICP monitor) are not included here. In such patients the main reason for admission is head injury and thus the admission type would be ***unplanned - other***.

RETRIEVAL DATA

Data are collected on whether or not a child was retrieved / transferred into the PICU. From mid-2014 onwards units transferred to using a revised version of the admissions form where

type of transport team is collected according to the following definition:

- *PICU* identifies that a specialised PICU team transferred the child.
- *Centralised transport service (PIC)* identifies that a transport team from a centralised PIC transport service transferred the child.
- *Other specialist team* identifies that another specialist team (not a specialist PIC or neonatal transport team), transported the child to your unit, e.g. A&E or theatre staff transferred the child.
- *Other non-specialist team* identifies that another non-specialist team transported the child to your unit.
- *Unknown* means that the transport team type could not be identified.

Tables 26 – 28 present data for 2015 and 2016 only.

VENTILATION STATUS

Length of ventilation has been calculated in days. Any ventilation episode during the period midnight to midnight was counted as one complete day (e.g. a child intubated and ventilated at 23.45 on 7 March and extubated at 02.30 on 8 March would count as two days of ventilation). Intubation and extubation times are not recorded in the PICANet dataset therefore more precise ventilation duration times are not available.

STANDARDISED MORTALITY RATIOS

Tables and figures showing the standardised mortality ratios for all units have been reproduced from the National Report so that table and figure numbering is consistent across

both reports. These tables include all patients admitted to PICU regardless of age. These ratios are calculated using the recalibrated PIM2 for 2014 data and the published version of PIM3 for 2015 and 2016 data. More detail can be found in the 2016 Annual Report.

NEW DATASET

Two new measures were introduced in mid-2014: these were unplanned extubation, expressed as a rate per 100 intubated days and high flow nasal cannula therapy. By the 1st January 2015 all units had started collection of these new data items.

UNPLANNED EXTUBATION

A table showing the rates of unplanned extubation per 100 intubated days has been produced for Scottish children. The figure has been reproduced from the Annual Report and presents the rates by PICU. Unplanned extubations were calculated for all children admitted to PICU regardless of age.

HIGH FLOW NASAL CANNULA THERAPY

A table showing the numbers of high flow admissions by organisation with the number of days in which high flow nasal cannula therapy was administered and details of the median, minimum and maximum days of therapy has been produced for Scottish children.
